EDUCATION

Yıldız Technical University

Mathematical Engineering (100% English)

2024-2028(Expected)

Izmir University of Economics

Computer Engineering (100% Scholarship)(100% English)
(Due to personal reasons, I transferred to Yıldız Technical University in 2024)

Ortaklar Fen Lisesi

2019-2023

SKILLS

Team leadership
Team Work
Strategic Communication

Linux/UNIX
MS Office Programs

Programming Languages
Python, TypeScript, JavaScript, C

Mobile Development
React Native (iOS/Android), NativeWind
UI/UX implementation, frontend development

Web Development
Vue.js, JavaScript, HTML5, CSS3

Data Analysis
Python (Pandas, NumPy)

Tools and Version Control
Git/GitHub
npm

ABOUT ME & OBJECTIVE

To whom it may concern,

I possess a unique ability to adapt to all environments. Through my proactive nature and strong communication skills in all aspects of life, I consistently push myself one step ahead. In every setting I find myself in, I am eager to learn by stepping outside my comfort zone. A concrete example of this is my rapid advancement to Board Member positions in volunteer-based student clubs, demonstrating my ability to quickly integrate and contribute meaningfully to any organization.

I have been passionate about software development for many years, a pursuit that has been further strengthened through my university education. My academic background has equipped me with strong mathematical foundations and the ability to develop mathematical models for problem-solving. I am currently advancing my expertise in data manipulation, machine learning, and deep learning, while also maintaining interests in website development and mobile application development.

As for my social hobbies, I believe my travels best reflect who I am and represent my most defining interest. I enjoy exploring each destination through three dimensions (politics, economy, and culture) to continuously broaden my perspective and general knowledge.

Thank you for viewing my resume.

VOLUNTEER WORKS

Frontend Developer | ESTIEM (European Students of Industrial Engineering and Management)
September 2024 - Present

When I initially started, my main focus was on resolving incoming issues, primarily working on cosmetic updates and minor improvements. After a year, I have progressed to working on comprehensive problem identification and structural modifications. My current responsibilities include restructuring the data flow architecture, evaluating and replacing testing technologies, and implementing significant architectural changes to improve the overall system performance and maintainability.

Vice President of Corporate Relations | ESTIEM (European Students of Industrial Engineering and Management) Local Group of Izmir-Economy
May 2024 - September 2024

This role equipped me with essential skills in committee management, corporate communication, and financial administration. I successfully organized two events, securing corporate sponsorships and managing budget calculations.

PROJECTS

React Native Mobile Application [September 2025 - (On process) | Collaborative Project

- **Tech Stack:** React Native, Expo, TypeScript, NativeWind
- Developed and implemented UI/UX for a cross-platform mobile application using React Native and TypeScript.
- Integrated RESTful APIs to connect with backend services for data fetching and user interactions.
- Collaborated with backend developer to ensure seamless API integration.
